

Non-Slip Treatment for Tiles, Enamel, Porcelain & Concrete

SlipSolv™ is not a coating, it is a treatment. Most anti-slip products add grit to a surface and then hold it in place with epoxy. It is a two-step process that typically costs between \$8 & \$10 per square foot for treatment.

SlipSolv™ treats the surface rather than adding a layer to it. The treatment process expands the pores, thus releasing built up dirt from both tile and grout, bringing the surface back to 'like new' condition. The cost of treatment is up to 1/10th that of applying a coating product.

Applications:

note: not for polished/gloss surfaces

- ▶ dining rooms/kitchens
- ▶ swimming pools/tile decks
- ▶ work areas/garage floors
- ▶ bathtubs/showers
- ▶ sidewalks/garden path
