

**ecoSolv Technologies**

using science - not chemicals  
advanced plant & surface care technologies

### ecoSolv™ - Advanced Science, Not Stronger Chemicals

**ecoSolv™ Technologies** manufactures and distributes a line of advanced technologies that provide many benefits for **plant health & surface protection**. Our highly efficient treatments are hypoallergenic, non-toxic, non-fuming, readily biodegradable, conserve water, and are safe for plants, humans and the environment.

**ecoSolv™** currently provides products and services to industrial and commercial clients through a network of independent sales representatives, distributors and rebottlers. Our products will soon be available in retail outlets.

Our company is growing, and since client service is a premium component of our business model, we are always on the lookout for independent sales people and existing distribution networks. If you are considering a new career with a dynamic and expanding company, **tell us about you.**

### ecoSolv on Emerald Planet TV

[www.emeraldplanet.org](http://www.emeraldplanet.org)

**WE HAVE** small feet !

Many molecular technologies require substantial artificial heat to be applied during the blending process. This is not true of **ecoSolv™** formulations. In fact, the carbon footprint at our Ohio blending facility is .016, smaller than in a typical household.

### ecoSolv™ Divisions

Our agriculture division stars **ecoAgra™**, a very pure and natural way to protect plants of all varieties.

**ecoAgra™** increases the yield of the ingredients used in its own formulation, thus making it truly sustainable.

**ecoSurf™** provides protection for almost any surface or material. **ecoClean™** is used to prepare the substrate, which is then protected by **ecoGlas™**, followed by **ecoGard™**, a long-lasting mechanical antimicrobial.

#### Our main areas of focus are;

- ✔ plant yield, health & protection
- ✔ surface preparation & cleaning
- ✔ liquid glass surface protection
- ✔ mechanical antimicrobial protection
